

# What are GLEC and ISO-14083?

**BAXTER FREIGHT**  
SUSTAINABLE FREIGHT NETWORK

## What is GLEC?

The **Smart Freight Centre** designed the Global Logistics Emission Council (GLEC) Framework to provide a standardised method for reporting emissions across the logistics sector.

This framework guides logistics companies to provide transparent reporting of their carbon emissions.

This started as the foundation for the new ISO-14083 standard.

## What is ISO-14083?

ISO-14083 was introduced in 2023 to replace the European Standard EN 16258, offering a global standard for emissions reporting.

It covers emissions from all transport modes and emphasises end-to-end shipment coverage, including “empty miles” and hub operations.

ISO-14083 offers a more detailed framework than GLEC and holds businesses to a standardised form of reporting.

## What are the benefits?

Providing carbon emission reporting that is compliant with these standards provides many benefits.

- **Being compliant with regulations** by staying ahead of emissions standards
- **Meet customer demand** for transparency and sustainability.
- **Demonstrate corporate responsibility** through accurate emission reporting guidelines.
- **Enhance supply chain efficiency** by making data-driven decisions

## How can we help?

We understand the importance of aligning with these standards to drive meaningful change.

Our **GLEC-verified and ISO-14083-compliant Scope 3 Solution** calculates your Scope 3 carbon emissions across all modes of transport.

This report provides comprehensive, accurate and credible insights into your scope 3 emissions, which you can easily share with your own customers.

## SCOPE 3 Reporting

Measuring carbon to manage your future
